

The Ski Resort Industry's Solution to Self-Serve, Automatic Validation of Staff Temperature at Sign-In

ALL NEW Checkpoint by EDGEauditor™ is a cost effective, all-in-one self-service kiosk that allows ski resort employees to sign in and automatically have their temperature validated.

With built-in secure facial recognition, this solution is the perfect way to protect your team, guests and operations – even in a fast-paced environment.

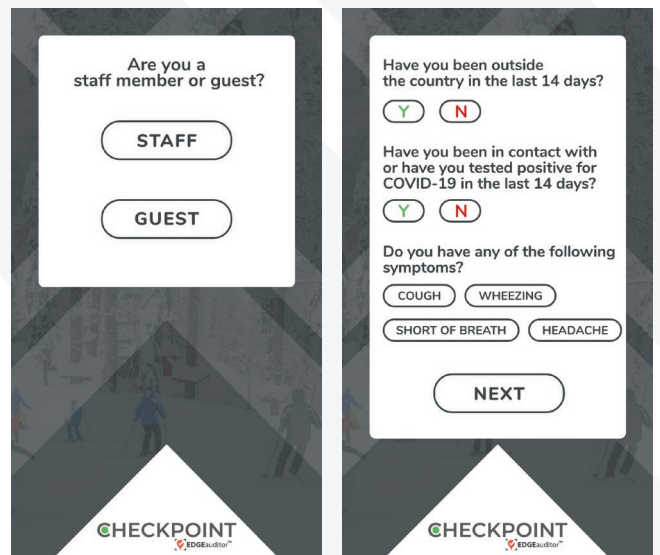

**Checkpoint by EDGEauditor™ simply requires a WIFI or ethernet connection and a nearby power outlet.*

Self-Service Experience Easy as 1,2,3

- 1 Upon entry to your select location, the screen will prompt your staff member to walk towards it.
- 2 Once within 3 feet, the screen will validate their thermal temperature using the on-board thermal camera while conducting facial recognition.
- 3 Upon a successful reading, the screen and its surrounding lights turn green and advise the individual to proceed. In the event of a high temperature, screen lights will turn red and notify the individual to refrain from proceeding.

[Optional] Have specific questions to ask your staff such as 'Do you have any of the following symptoms?'. Add the available self-assessment questionnaire module.

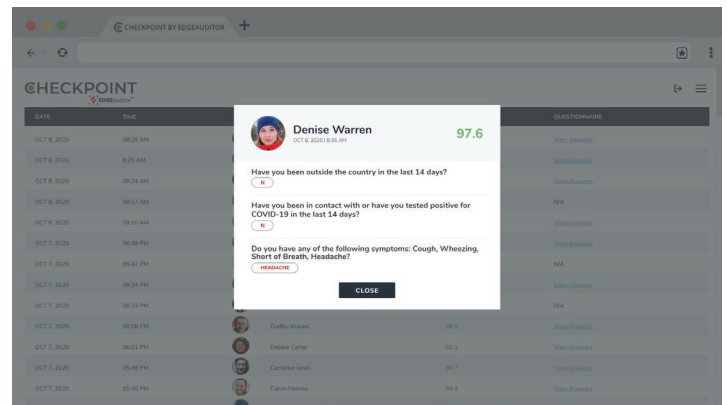

Automatic Temperature Validation for Staff Entry Points

Validate that your staff are within an appropriate temperature range by making the screen available near time clock check-in points. A historical log of all temperature checks is kept, including a photo of the staff member and their registered temperature.
